

## Lesson 18-B, page 2

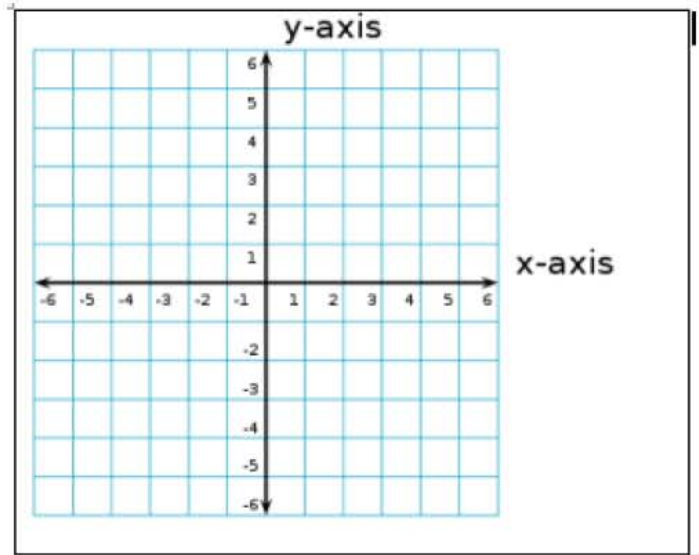

**Remember...**

To graph a line by Point-Plotting:

1. Pick a value for either  $x$  or  $y$ .
2. Solve the equation for the unknown value.
3. Plot the point, and repeat these steps for another value.
4. Hint: pick numbers that make the equation easy to solve.

Example 2:  $y = -x + 2$ 

$x$	$y$

Example 3:  $x + 3y = 6$ 

$x$	$y$
